

HIPAA Encrypted Secure Email Features:

Professional Email Address

Make a good first time impression with a professional "you@yourcompany.com" email address. When you use free email services like Gmail/Yahoo/Hotmail/AOL, it tells people right away that you don't have HIPAA Compliant Email. Already have a domain name? No problem, you can use it with our email service.

Say Goodbye to Spam and Viruses

Our "State of the Art" Anti-Spam system blocks over 90% of spam. You can also block unwanted senders and Whitelist trusted senders to bypass spam filtering. Our built-in Anti-Virus Scanner updates itself every hour and cleans all messages to ensure you are protected from malware infected emails.

Secure End-to-End Email Communications

No messy configurations, certificates, or software to install. We provide Transport Layer Security 1.2 (TLS), 256-bit AES Encryption (AES-256), Secure File Link, Password Protected Message Encryption, and Data Leak Prevention (DLP) all integrated in one simple to use platform without additional costs!

Lightning Fast PUSH Email

Expecting time sensitive emails? With PUSH Technology, you get emails instantly pushed to your inbox! You no longer have to manually check for emails, they will automatically be pushed to your Webmail and compatible computer software! Mobile devices will require ActiveSync for Push Email.

Complimentary Setup & Migration (\$1,000+ Value)

Want to switch but don't want to deal with the hassle of moving to a new host? Not a problem! No matter how big or small your company is, we will migrate you over from another service provider free of charge, all done seamlessly and completely pain free. For a limited time, we will waive our \$50 per hour charge.

Cloud Drive (Optional)

Imagine having a portable hard drive that is available everywhere, on any computer, or mobile device. Easily collaborate with your team on Microsoft Office and other documents in real-time. Share your files with colleagues and send attachments directly from your Cloud Drive with a few simple clicks.

Massive Email Storage Space

Each email box comes with 5GB of storage and up to virtually unlimited storage is available for only \$2 for every 5GB. For the average person, 5GB can store an up to of 50,000 emails or more. There are no file size restrictions when receiving emails. You can send secure files up to 2GB in size!

ActiveSync (Optional)

Syncing email, contacts, calendars, and tasks between our Webmail and most smartphones is quick, easy, and automatic with Direct PUSH Technology. ActiveSync can also send a "Remote Wipe" command to your smartphone in case you ever lose it, to erase all data on that device.

Collaboration Suite (Groupware)

Experience "Enterprise Class" team collaboration features that most people associate with Microsoft Exchange, such as sharing email, contacts, calendar, tasks, and notes through our webmail interface. A popular feature is setting up a centralized company calendar that can be accessible by all employees.

Email Archiving (Optional)

Never lose an email again! We archive all incoming and outgoing messages for six years. That means if you accidentally delete a message and need proof of delivery or have a disgruntled employee on a war path to sabotage your systems, we can easily restore missing emails with a click of a mouse.

Secure Desktop & Mobile Webmail Access

Access your email anywhere there is an internet connection. Save thousands of dollars on purchasing desktop software by switching to our Secure Webmail interface. Enjoy the convenience of drag & drop and right-click menus. There is nothing to install, just open up a web browser on any device.

Peace of Mind

Enjoy "Mission Critical" **99.9% Uptime**. We offer complimentary setup and migration to ensure you are up and running with zero downtime when switching from another email service. We offer U.S. Based technical support and a 30-Day Money Back Guarantee. No contract, no hidden fees, cancel anytime.

Smartphone & Tablet Support

Email is no longer associated to a computer. In this day and age, email can be accessed via smartphones and tablets. We provide secure encrypted connections to most mobile devices. Our HIPAA Compliant Email service is fully compatible with iPhone, iPad, Android, and Windows Phones.
